> RED VARIETIES **MALBEC**

- Malbec is the **flagship variety of Argentina** and the one that best represents the local palate, which is quite paradoxical, considering that it's a varietal of French origin.
- Since 2000, Argentine producers have begun to focus on origin, resulting in **Malbecs that celebrate the identity of each terroir**.
- Refined, vigorous and balanced, Malbec offers a diversity of styles. Its noble and versatile character makes Malbec the variety that best reflects the **diversity of Argentine wine regions**.

MALBEC

> RED VARIETIES **MALBEC**

- Since 2011 it has been the most cultivated variety in the country. Leader in volume, quality and exports worldwide.

■ Aromas & Flavours

Its aromas are reminiscent of cherries, strawberries, plums, raisins and black pepper and in some cases, cooked fruits. Aged in oak, it acquires notes of coffee, vanilla and chocolate. In the mouth it fills the palate with its sweet, silky tannins.

■ Pairings

It is the quintessential red wine to accompany any dish: from the traditional Argentine barbecue to other dishes such as pasta, pizzas, tamales or sushi.

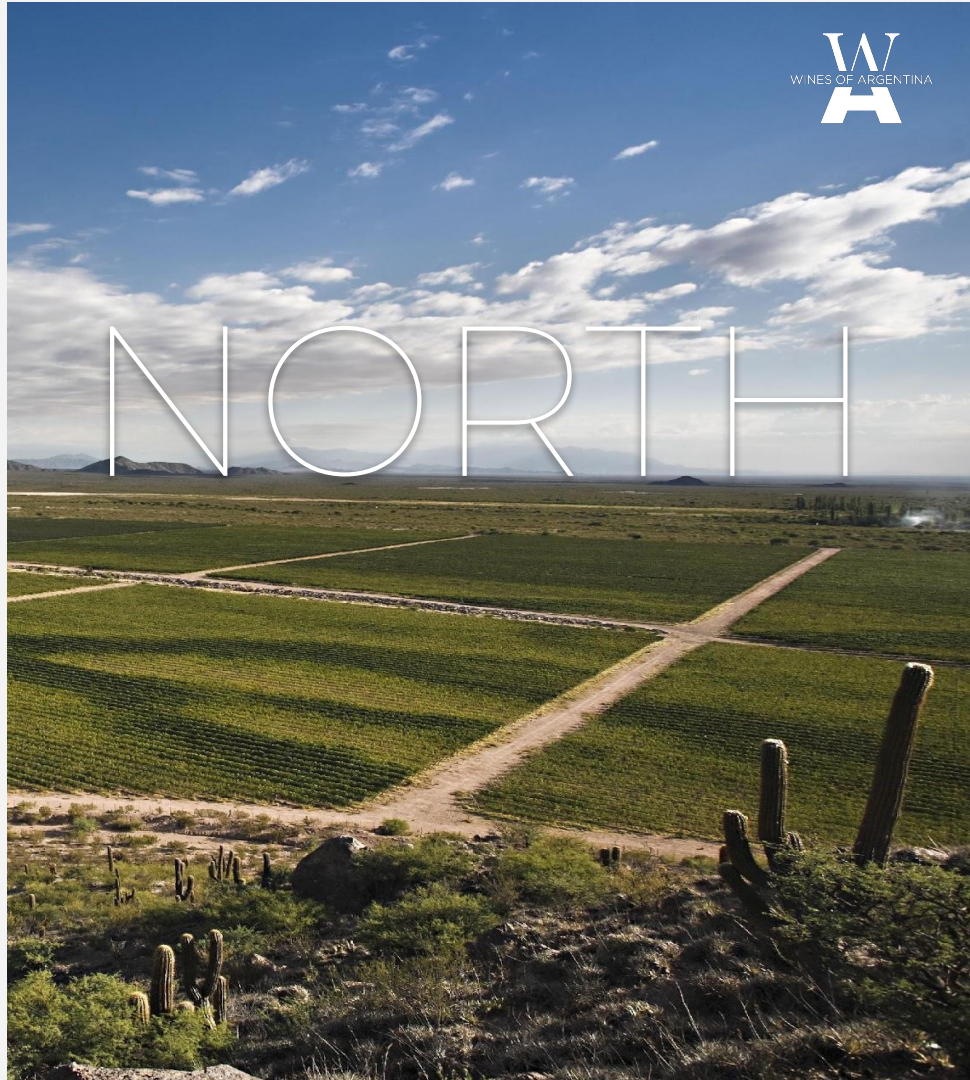

> RED VARIETIES **MALBEC**

The **Argentine North** stands out for its high altitude, low latitude and high insolation in the region, which gives Malbec a blackish color and a lot of intensity.

Aromatically it is characterised by ripe black fruit and jam, combined with spicy notes of herbs or peppers, typical of the area.

In the mouth it has marked tannins, excellent concentration, texture and very good length.

> RED VARIETIES **MALBEC**

Located in the center-west of the country, the **Cuyo region** is influenced by the Andes Mountains, with varied altitudes and very heterogeneous soils.

The Malbecs of Cuyo have a ruby reddish color. Aromatically they are characterised by the presence of fruits such as quince, figs and plums, and notes of caramel.

Wines with alcohol levels that generate sweetness and smoothness in the mouth.

> RED VARIETIES **MALBEC**

Patagonian Malbec achieves very good maturity due to the characteristics of the region: high latitude, lower altitude, sun exposure and strong winds.

Reddish-black hues are often perceived, and very ripe fruit aromas such as sweet red berries, jam, caramel and raisins, are noticeable in the nose.

In the mouth they have high levels of tannins that give texture and structure to the wines.

> RED VARIETIES **MALBEC**

The Atlantic region stands out for its pronounced thermal amplitude, its proximity to the ocean and the influence of its maritime winds, which give the Malbec intense red colors with violet hues.

Wonderful aromas of liquorice, red fruits and the freshness of menthol are present.

In the mouth this sensation of fruit and freshness is repeated, presenting itself as a stylish, elegant wine, with soft tannins and a long and delicate finish.

> RED VARIETIES

MALBEC & TERROIR

The Malbec boom led Argentine wine producer to wonder about what they knew about the variety.

Researchers from the National Institute of Agricultural Technology (INTA) and other private companies began to study it in detail.

■ Main Conclusions

Malbec does not have its own varietal aromas, but **shares aromatic families with the main red varieties.**

The **temperature in the period of maturity** is a **key factor** to achieving differentiated expressions.

Malbec expresses different aromatic families that can be **associated with terroir conditions.**

> RED VARIETIES

BONARDA

It is the second most cultivated red variety after Malbec and one of the most traditional.

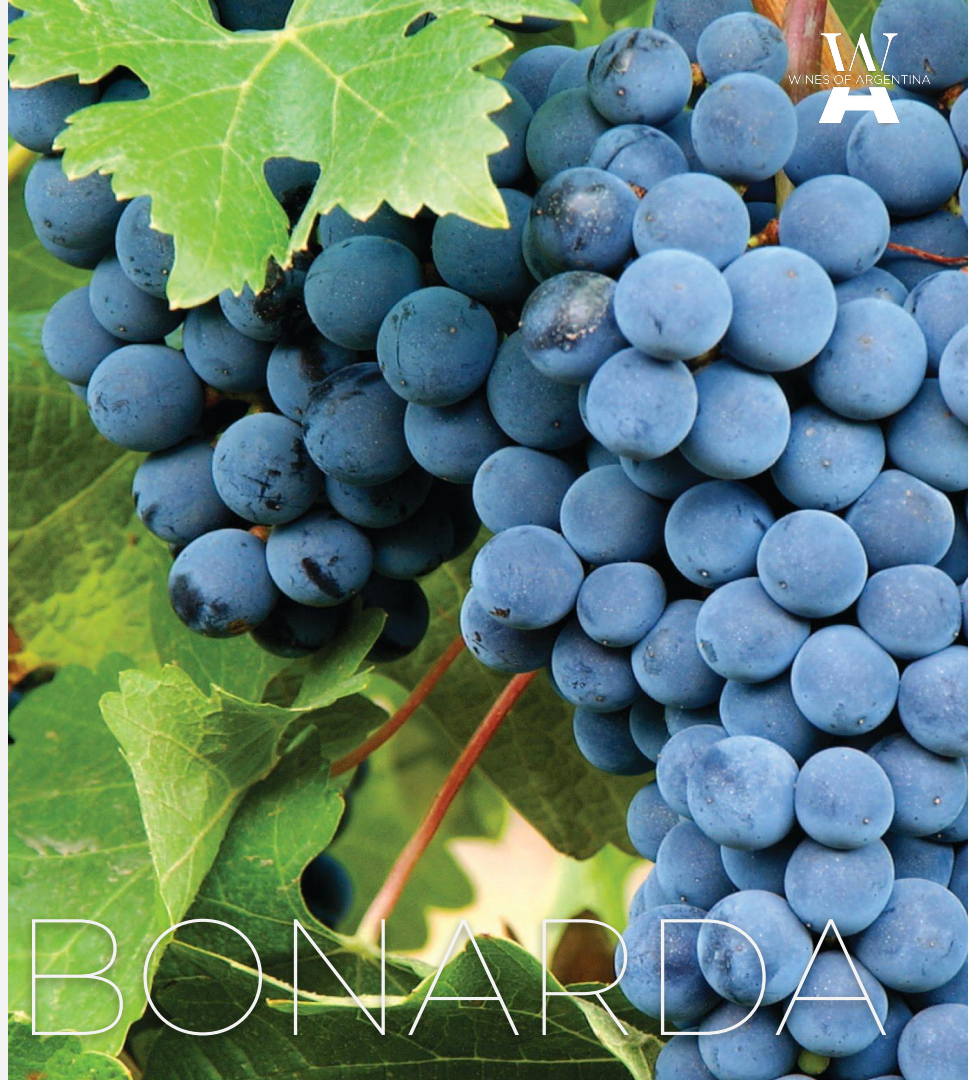

Producers have recently discovered the potential of Bonarda as a varietal, its importance being evident by its adaptability to hot regions.

■ Aromas

Raspberry aromas and subtle aniseed notes. When it is used in blends, it provides intensity and fruity notes.

■ Body & Colour

It produces wine with good body and colour. Its structure allows it to be aged in barrels with very positive results.

> RED VARIETIES

CABERNET SAUVIGNON

Nicknamed "*the king of reds*". Together with Malbec, it is one of the varieties that has been most researched in recent years, in addition to offering different profiles depending where it is grown.

Argentina offers at least three Cabernet styles with a particularity: they all come from continental climates, something very rare to find in other parts of the world.

■ **Northwest**

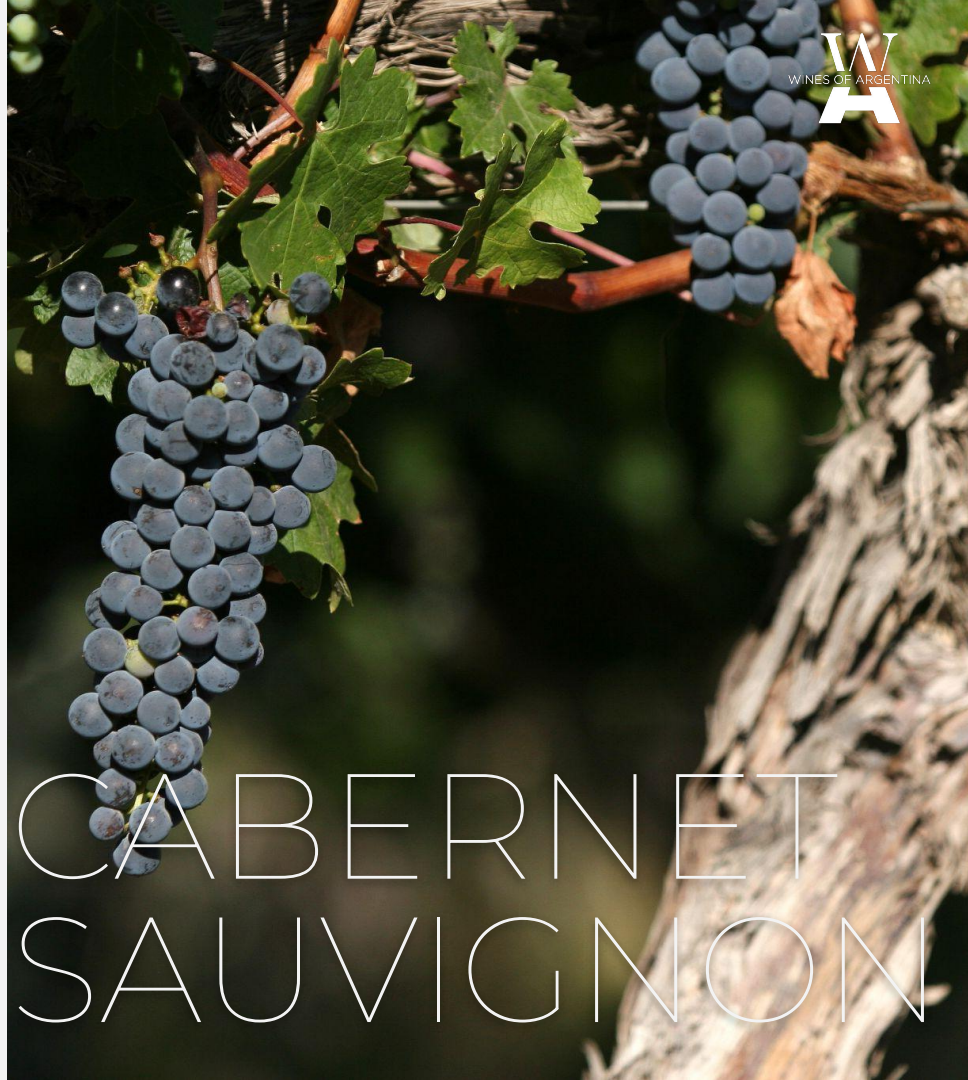

Amazing intensity of color with aromas of blackberries and green pepper.

■ **Cuyo**

It intensifies the fruity character described as ripe currants.

■ **Patagonia**

Mineral and earthy flavours are enhanced.

> RED VARIETIES

SYRAH

Historically used in the production of blends, in the last decade its cultivation has grown considerably.

It adapts very well to regions of strong insolation such as the Tulum Valley, in San Juan, and the eastern areas of Mendoza.

■ Aromas & Texture

In warmer regions, the wines present good colour and are fruit forward with textures and aromas that vary from floral, when young, to spicy after oak and bottle ageing.

> RED VARIETIES

TEMPRANILLO

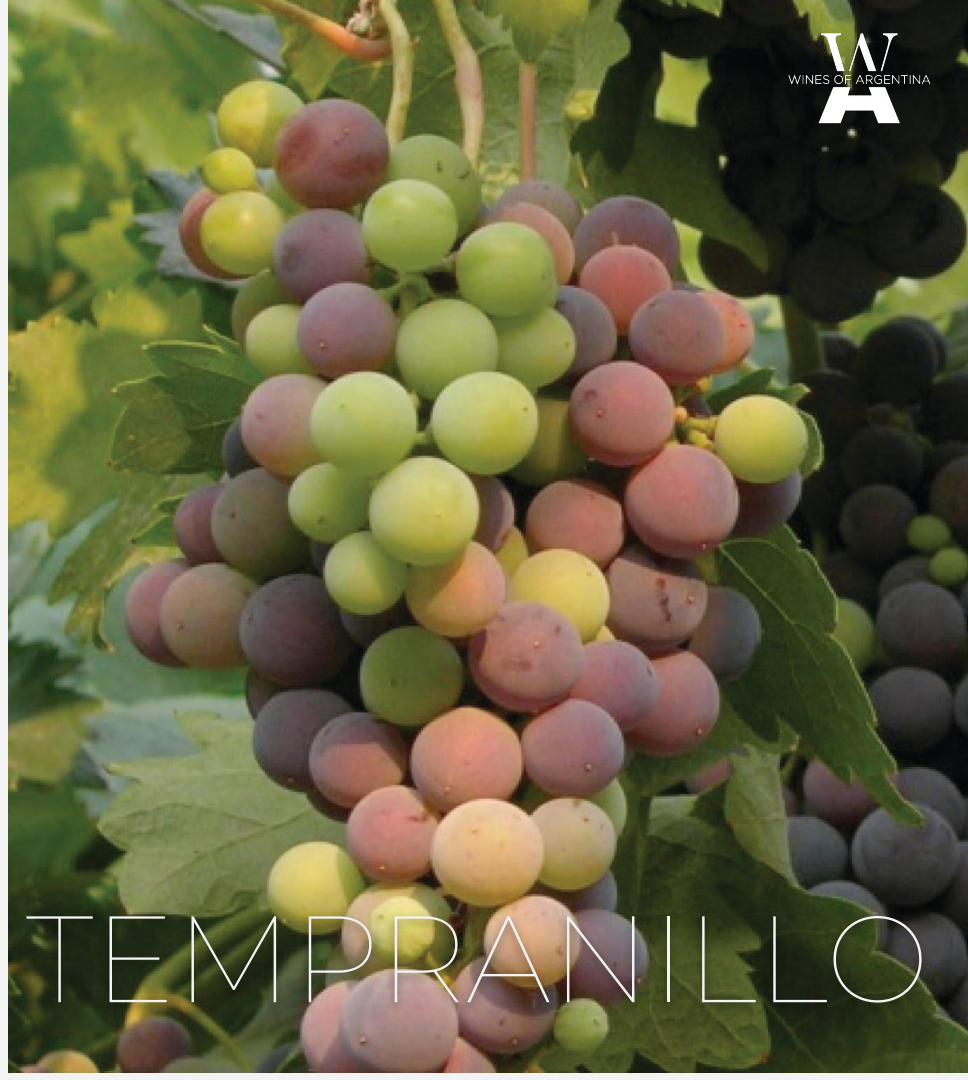

With Spanish roots, it was in Argentina that Tempranillo found a prominent place to be shown to the world.

Renowned for its strong tannins, its serene restlessness makes it one of the first grapes to mature.

Aged in American oak, in the Spanish style, it achieves exceptional qualities and an excellent capacity to evolve in the bottle.

■ Aromas

In its youth, it exhibits simple fruity aromas of raspberries and blackberries, as opposed to reserve wines, which develop mouth-filling licorice and roasted sugar notes.

> RED VARIETIES

MERLOT

With relatively recent diffusion and great potential, Merlot begins to unfold with timid vigor.

It has found its kingdom at high altitudes with fresh terroirs, common in the Uco Valley (Mendoza) and Río Negro Upper Valley Patagonia.

■ Aromas

Sweet pepper, cedar, currants and spices. With low production, it's a delicate wine, with an intense palate but without being too powerful.

> RED VARIETIES

PINOT NOIR

A relatively recent variety in Argentina. Originally from the humid climate of Bordeaux, it has adapted exceptionally well to the high altitude vineyards (+900 msnm) and to the dry climate of Mendoza.

Planted in the 90's to give strength to blends, without any plan for it to become a varietal in itself.

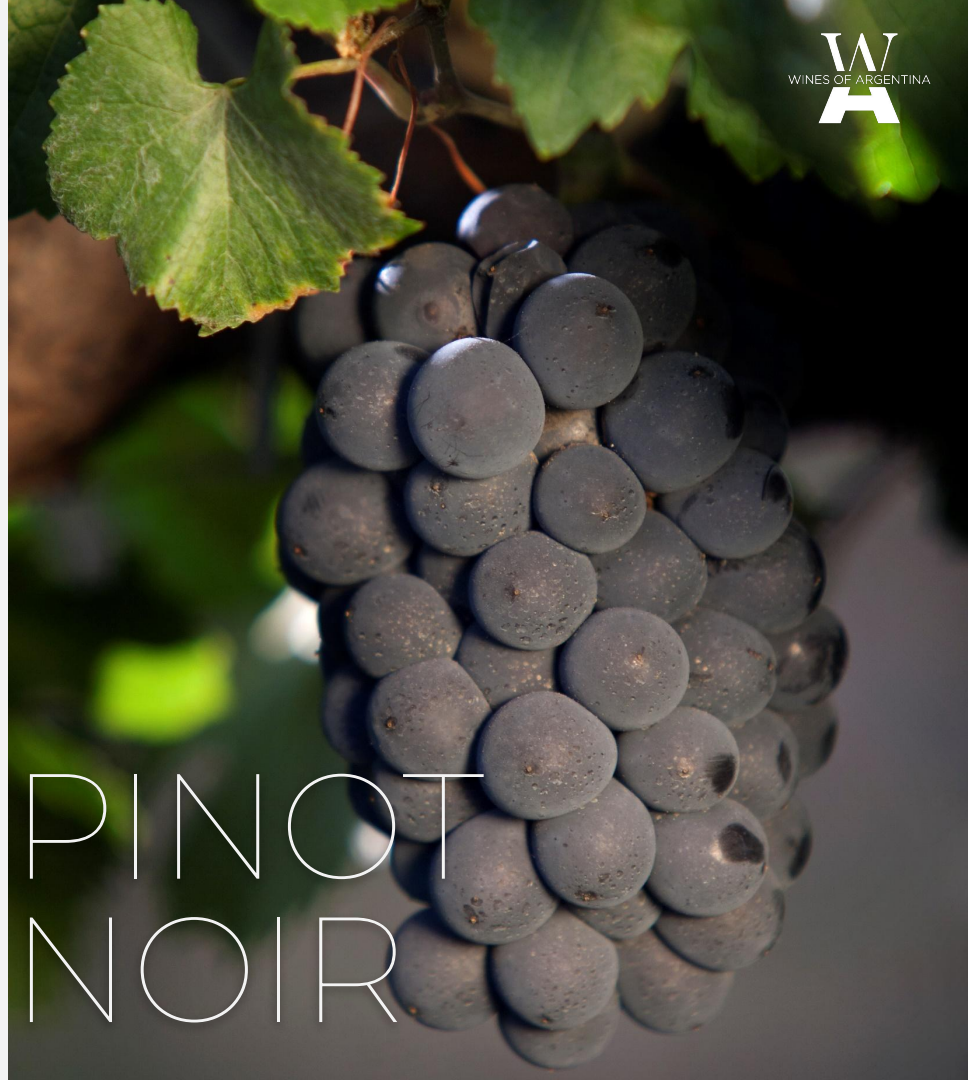

Although the area planted with Cabernet Franc is minimal in relation to other reds, the variety excels in quality.

■ Aromas

Good aromatic homogeneity of red and black fruits in which raspberry, blackberry, beets and earth stand out.

■ Colour & Flavor

Its color ranges from ruby to deep red. In the mouth it has very elegant flavours.

> RED VARIETIES **TANNAT**

Originally from the southwest of France, more precisely from the Madiran AOC.

It is a late sprouting, long cycle vine, characterised by being extremely productive and vigorous.

Tannat has found an ideal terroir in Cafayate, since it is an astringent variety that in Salta achieves good maturity to round out its tannins and make them friendlier.

■ **Aromas**

In the north west of Argentina this strain is very aromatic, with pronounced notes of black fruit, menthol and graphite.

■ **Colour & Flavor**

It gives wines of intense colours, with great tannic intensity, with good acidity.

> RED VARIETIES

PETIT VERDOT

Originally from Bordeaux, Verdot arrived in Argentina as a blending grape. It has been gaining popularity as a varietal for its gustatory delights.

It requires a lot of work in the vineyard, because it is a high yielding grape.

Petit Verdot develops a very different personality in dry and sunny climates (Mendoza, San Juan and La Rioja).

This allows for another ripening point, which makes its wines voluptuous and at the same time rounded.

> WHITE VARIETIES

TORRONTÉS

It is one of the most widespread white wines and has achieved remarkable international recognition.

It is found only in Argentina and is considered the most famous criolla variety. There are three variants:

Torrontés **Mendocino** and **Sanjuanino**: which are lighter and fresher, and **Riojano**, the most cultivated and expresses the best qualities for the production of fine wines, very fruity and dry at the same time; those from the Cafayate Valley GI (Salta) particularly stand out.

■ Colour

Light yellow wine that occasionally develops golden, green hues.

■ Aromas

Aroma of flowers (rose, jasmine and geranium), with the occasional appearance of spicy effluvia. Although its aromas anticipate a sweet wine, its flavour reveals fresh acidity.

■ Pairings

Pairs well with fish and seafood; regional cuisine of northwestern Argentina; spicy and well-seasoned foods, such as Thai, Indian, Chinese and Vietnamese.

> WHITE VARIETIES

CHARDONNAY

It is second among the traditional white varieties of Argentina. It is highly appreciated due to its ability to ripen well and produce a wide range of wines, from the foundations for sparkling wines to the corpulent varieties fermented in oak barrels, through fresh and elegant wines without oak ageing.

■ Aromas

Its most recurrent primary aromas are tropical fruits and apples.

A close-up photograph of several ripe, yellow-green Chardonnay grapes. The grapes are clustered together, with some in sharp focus and others blurred in the background. The lighting is soft, highlighting the texture of the grape skins.

> WHITE VARIETIES

CHENIN

It has adapted very well to Argentine terroirs. It was one of the most used for the development of white table wine during the twentieth century, and later used to bring freshness and structure to white blends.

It has recently become very popular among winemakers looking to rediscover classic varieties. The result is fresh, easy to drink wines.

■ Aromas

They are usually compared with the aromas of white peach.

> WHITE VARIETIES **VIOGNIER**

A native grape of Bosnia, it was introduced in Argentina in 1993, where it has been gradually unveiled, becoming more and more interesting.

Viognier is suitable for production in stainless steel vats and for fermentation and aging in oak barrels.

■ **Aromas**

When young, it is fresh with tones of flowers, tropical fruits and an unmistakable descriptor of caramel; while after a few years of oak ageing it presents almond aromas.

> WHITE VARIETIES **SEMILLÓN**

Established in Argentina from the end of the 19th century, it develops very well in cool and moderate climates, such as the Uco Valley (Mendoza) and the Alto Valle del Río Negro (Patagonia). The palate has great personality that achieves a very good balance.

■ Aromas

In Cuyo it acquires aromatic tones of white fruits and honey. In Patagonia there are hints of apples and earth. In both cases, it evolves very well in the bottle to form complex olfactory nuances.

■ Flavor

The palate has great personality that achieves a very good balance.
